Download this website in a single [pdf file](#).

This page describes how this website is setup.

## 1.1 Setup

1. Install the dependencies in `./docs/requirements.txt`.

```
sphinx==4.3.2
sphinx-autodoc-typehints==1.12.0
sphinx_rtd_theme==1.0.0
sphinxcontrib-bibtex==2.4.1
```

2. Use `sphinx-quickstart` to generate the skeleton. When it prompts:

```
Separate source and build directories(y/n)
```

Answer yes.

3. Edit `docs/source/conf.py` and add the following lines to it:

```
import sphinx_rtd_theme
extensions = [
    'sphinx.ext.autodoc',
    'sphinx.ext.autosummary',
    'sphinx.ext.githubpages',
    'sphinx.ext.mathjax',
    'sphinx.ext.napoleon',
    'sphinx.ext.todo',
    'sphinx.ext.viewcode',
    'sphinxcontrib.bibtex',
]

html_theme = 'sphinx_rtd_theme'

master_doc = 'index'
pygments_style = 'sphinx'
html_theme_path = [sphinx_rtd_theme.get_html_theme_path()]
smartquotes = False
html_show_sourcelink = True

html_context = {
```

(continues on next page)

(continued from previous page)

```
'display_github': True,
'github_user': 'csu-fangjun',
'github_repo': 'notes',
'github_version': 'master',
'conf_py_path': '/docs/source/',
}

html_theme_options = {
    'logo_only': False,
    'display_version': True,
    'prev_next_buttons_location': 'bottom',
    'style_external_links': True,
}
latex_engine = 'xelatex'
```

4. To generate the notes in pdf format, use `make latex`, which generates lots of `tex` files in `./build/latex`. Switch to `build/latex` and run `make`. Assume that you have installed the software to compile `tex` files. It will generate `notes.pdf`.

## 1.2 How to include code from a file

See <https://www.sphinx-doc.org/en/master/usage/restructuredtext/directives.html#directive-literalinclude>.

1. Show line number: `:linenos:`. By default, line number counts from 0. To add an offset, e.g., 10, to the line number, use `:lineno-start: 10`. Note: It still includes all the contents of the file.
2. To emphasize a line, specified lines, or specified line ranges, use: `:emphasize-lines: 10`, `:emphasize-lines: 10,12,14`, and `:emphasize-lines: 12,15-18`. Note: `emphasize` means to change the background color.
3. Set the language, e.g., `:language: python`.
4. Set the caption, e.g., `:caption: hello world`.
5. To include a function from the python file, use `:pyobject: my_func`.
6. To include specified lines, use `:lines:1,3,5-10,15-`. Note that if using this option, line number counts from 0. Use `:lineno-start: xx` to change the offset for display.

## 1.3 Link

See <https://sublime-and-sphinx-guide.readthedocs.io/en/latest/references.html> and <https://www.sphinx-doc.org/en/master/usage/restructuredtext/basics.html#hyperlinks>

### 1.3.1 hello

Here is a link to *hello*.

```
.. _Link to hello:
```

```
hello
```

```
-----
```

```
Here is a link to :ref:`Link to hello`.
```

This page describes commonly used git commands.

## 2.1 Commands

### 2.1.1 rev-parse

It is quite common to get the root directory of the repository with the command:

```
git rev-parse --show-toplevel
```

For instance, the above command executed in this repository prints something like as follows:

```
/xxx/notes
```

The following shows its usage in a Python script:

```
#!/usr/bin/env python3

import subprocess

d = (
    subprocess.check_output(["git", "rev-parse", "--show-toplevel"])
    .decode("ascii")
    .strip() # remove the trailing \n
)
print(d) # /path/to/notes
```

It can also be used in bash script:

```
root_dir=$(git rev-parse --show-toplevel)
echo "root_dir ${root_dir}"
```

help git-rev-parse outputs helpful information for git rev-parse. In particular, it explains the differences among HEAD~, HEAD~n, HEAD^, and HEAD^n. The following shows the help information about it:

```
<rev>^[<n>], e.g. HEAD^, v1.5.1^0
  A suffix ^ to a revision parameter means the first parent of that commit object. ^
  ↪<n> means the <n>th parent
```

(continues on next page)

(continued from previous page)

(i.e. `<rev>^` is equivalent to `<rev>^1`). As a special rule, `<rev>^0` means the commit itself and is used when `<rev>` is the object name of a tag object that refers to a commit object.

`<rev>~[<n>]`, e.g. `HEAD~`, `master~3`

A suffix `~` to a revision parameter means the first parent of that commit object. A suffix `~<n>` to a revision parameter means the commit object that is the `<n>`th generation ancestor of the named commit object, following only the first parents. I.e. `<rev>~3` is equivalent to `<rev>^^^` which is equivalent to `<rev>^1^1^1`. See below for an illustration of the usage of this form.

$A = A^0$   
 $B = A^1 = A^1_1 = A_{~1}$   
 $C = A^2$   
 $D = A^{11} = A^{1^1}_1 = A_{~2}$   
 $E = B^2 = A^{12}$   
 $F = B^3 = A^{13}$   
 $G = A^{111} = A^{1^1^1}_1 = A_{~3}$   
 $H = D^2 = B^{12} = A^{112} = A_{~2}^2$   
 $I = F^1 = B^{13} = A^{113}$   
 $J = F^2 = B^{132} = A^{1132}$

## 3.1 Installation

### 3.1.1 macos

Refer to <https://docs.docker.com/desktop/mac/install/>.

## **4.1 TikZ**

### **4.1.1 Basics**

This page describes commonly used git commands.

## 5.1 Decoding

```
CompactLattice compact_lat;  
decoder.GetLattice(true, &compact_lat);  
  
CompactLattice compact_best_path;  
CompactLatticeShortestPath(compact_lat, &compact_best_path);  
  
Lattice best_path;  
ConvertLattice(compact_best_path, best_path);  
  
std::vector<int32_t> tokens;  
std::vector<int32_t> words;  
LatticeWeight weight;  
GetLinearSymbolSequence(best_path, &tokens, &words, &weight);
```

- `decoder/simple-decoder.{h,cc}`

## 6.1 sort

Sort files in the folder `t`. The filename has the pattern `xxx.n.txt`, where `n` is some numerical value. Also, exclude `xxx.100.txt`.

```
find ./t -name "xxx*.txt" ! -name "xxx.100.txt" -print0 | sort -z -t. -k2 -n | xargs -r0
```

## 6.2 echo

Generate a binary file:

```
echo -n -e '\x30\x31\x32' > a.bin  
hexdump a.bin
```

## CUDA

### 7.1 Installation

#### 7.1.1 CUDA 10.1.243

```
./cuda_10.1.243_418.87.00_linux.run --silent --toolkit --installpath=/ceph-data4/fangjun/  
↪software/cuda-10.1.243 --no-opengl-libs --no-drm --no-man-page  
  
# Install cuDNN  
cd /ceph-data4/fangjun/software/cuda-10.1.243  
tar xvf /ceph-sh0/fangjun/cudnn/cudnn-10.1-linux-x64-v8.0.4.30.tgz --strip-components=1
```

```
#!/usr/bin/env bash  
  
export CUDA_HOME=/ceph-data4/fangjun/software/cuda-10.1.243  
export PATH=$CUDA_HOME/bin:$PATH  
export LD_LIBRARY_PATH=$CUDA_HOME/lib64:$LD_LIBRARY_PATH  
  
# See /ceph-fj/fangjun/py38/lib/python3.8/site-packages/torch/share/cmake/Caffe2/Modules_  
↪CUDA_fix/upstream/FindCUDA.cmake  
export CUDA_TOOLKIT_ROOT_DIR=$CUDA_HOME  
export CUDA_TOOLKIT_ROOT=$CUDA_HOME  
export CUDA_BIN_PATH=$CUDA_HOME  
export CUDA_PATH=$CUDA_HOME  
export CUDA_INC_PATH=$CUDA_HOME/targets/x86_64-linux
```

#### 7.1.2 CUDA 11.0.3

```
./cuda_11.0.3_450.51.06_linux.run --silent --toolkit --installpath=/ceph-data4/fangjun/  
↪software/cuda-11.0.3 --no-opengl-libs --no-drm --no-man-page  
  
# Install cuDNN  
cd /ceph-data4/fangjun/software/cuda-11.0.3  
tar xvf /ceph-sh0/fangjun/cudnn/cudnn-11.0-linux-x64-v8.0.4.30.tgz --strip-components=1
```

### 7.1.3 CUDA 11.3.1

```
./cuda_11.3.1_465.19.01_linux.run --silent --toolkit --installpath=/ceph-data4/fangjun/  
↪software/cuda-11.3.1 --no-opengl-libs --no-drm --no-man-page  
cd /ceph-data4/fangjun/software/cuda-11.3.1  
tar xvf /ceph-sh0/fangjun/cudnn/cudnn-11.3-linux-x64-v8.2.1.32.tgz --strip-components=1
```

### 7.1.4 CUDA 11.5.2

```
./cuda_11.5.2_495.29.05_linux.run --silent --toolkit --installpath=/ceph-data4/fangjun/  
↪software/cuda-11.5.2 --no-opengl-libs --no-drm --no-man-page  
cd /ceph-data4/fangjun/software/cuda-11.5.2  
tar xvf /ceph-sh0/fangjun/cudnn/cudnn-linux-x86_64-8.3.2.44_cuda11.5-archive.tar.xz --  
↪strip-components=1
```

### 7.1.5 CUDA 11.6.1

```
./cuda_11.6.1_510.47.03_linux.run --silent --toolkit --installpath=/ceph-data4/fangjun/  
↪software/cuda-11.6.1 --no-opengl-libs --no-drm --no-man-page  
cd /ceph-data4/fangjun/software/cuda-11.6.1  
tar xvf /ceph-sh0/fangjun/cudnn/cudnn-11.3-linux-x64-v8.2.1.32.tgz --strip-components=1
```

## 8.1 DDP

### 8.1.1 Initialization

## 8.2 TorchScript

### 8.2.1 Hello

See [https://pytorch.org/tutorials/beginner/Intro\\_to\\_TorchScript\\_tutorial.html](https://pytorch.org/tutorials/beginner/Intro_to_TorchScript_tutorial.html).

#### `torch.jit.script` as a decorator

Listing 1: `./code/1-ex.py`

```
1 @torch.jit.script
2 def adder(x: int):
3     return x + 1
4
5
6 def test_adder():
7     assert isinstance(adder, torch.jit.ScriptFunction)
8     print(adder.graph)
9     print("-" * 10)
10    print(adder.code)
11    adder.save("adder.pt")
12
13    my_adder = torch.jit.load("adder.pt")
14
15    assert isinstance(my_adder, torch.jit._script.RecursiveScriptModule)
16    assert isinstance(my_adder, torch.jit.ScriptModule)
17    assert not isinstance(my_adder, torch.jit.ScriptFunction)
18    print(my_adder(torch.tensor([3])))
19
20
21 """
22 graph(%x.1 : int):
23     %2 : int = prim::Constant[value=1]() # ./1-ex.py:8:15
```

(continues on next page)

(continued from previous page)

```

24     %3 : int = aten::add(%x.1, %2) # ./1-ex.py:8:11
25     return (%3)
26
27 -----
28 def adder(x: int) -> int:
29     return torch.add(x, 1)
30
31 4
32 """

```

### torch.jit.script as a function

Listing 2: ./code/2-ex.py

```

1  def adder(x: int):
2      return x + 2
3
4
5  def test_adder():
6      adder_func = torch.jit.script(adder)
7      assert isinstance(adder_func, torch.jit.ScriptFunction)
8      print(adder_func.graph)
9      print(adder_func(3))
10
11
12 """
13 graph(%x.1 : int):
14     %2 : int = prim::Constant[value=2]() # ./2-ex.py:6:15
15     %3 : int = aten::add(%x.1, %2) # ./2-ex.py:6:11
16     return (%3)
17
18 5
19 """

```

### torchscript a module

Listing 3: ./code/3-ex.py

```

1  class MyModel(torch.nn.Module):
2      def __init__(self):
3          super().__init__()
4          self.p = torch.nn.Parameter(torch.tensor([2.0]))
5
6      def forward(self, x: torch.Tensor):
7          return self.p * x
8
9
10 def test_my_model():
11     model = MyModel()

```

(continues on next page)

(continued from previous page)

```

12 scripted_model = torch.jit.script(model)
13 print(scripted_model.graph)
14 print("-" * 10)
15 print(scripted_model.code)
16 print(scripted_model(torch.tensor([10])))
17
18
19 """
20 graph(%self : __torch__.MyModel,
21       %x.1 : Tensor):
22   %p : Tensor = prim::GetAttr[name="p"](%self)
23   %4 : Tensor = aten::mul(%p, %x.1) # ./3-ex.py:12:15
24   return (%4)
25
26 -----
27 def forward(self,
28             x: Tensor) -> Tensor:
29     p = self.p
30     return torch.mul(p, x)
31 """

```

## Export and ignore methods

1. Use `@torch.jit.export` decorator to export a method.
2. Use `torch.jit.export` function call to export a method.
3. Use `@torch.jit.ignore` decorator to ignore a method.
4. Use `torch.jit.ignore` function call to ignore a method.
5. Use `@torch.jit.unused` or `torch.jit.unused` to ignore a method.

See [Load in C++](#) to load the saved file.

Listing 4: `./code/4-ex.py`

```

1 class MyModel(torch.nn.Module):
2     def __init__(self):
3         super().__init__()
4         self.p = torch.nn.Parameter(torch.tensor([2.0]))
5
6     def foobar(self, x: torch.Tensor):
7         return x + 3
8
9     def foo(self, x: torch.Tensor):
10        return self.foobar(x)
11
12    def bar(self, x: torch.Tensor):
13        return self.p - x
14
15    @torch.jit.export
16    def baz(self, x: torch.Tensor):

```

(continues on next page)

(continued from previous page)

```

17         return self.p + x + 2
18
19     def forward(self, x: torch.Tensor):
20         return self.p * x
21
22
23 def test_my_model():
24     MyModel.foo = torch.jit.export(MyModel.foo) # manually export
25
26     # Note: forward is exported by default. We ignore it here manually
27     MyModel.forward = torch.jit.ignore(MyModel.forward)
28
29     model = MyModel()
30     scripted_model = torch.jit.script(model)
31     assert hasattr(scripted_model, "foo")
32     assert hasattr(scripted_model, "baz")
33     assert hasattr(scripted_model, "foobar") # because it is called by `foo`
34     assert not hasattr(scripted_model, "bar")
35
36     scripted_model.save("foo.pt")
37
38     m = torch.jit.load("foo.pt")
39     print(m.foo(torch.tensor([1])))
40     print(m.baz(torch.tensor([1])))
41
42
43 """
44 graph(%self : __torch__.MyModel,
45       %x.1 : Tensor):
46     %p : Tensor = prim::GetAttr[name="p"](%self)
47     %4 : Tensor = aten::mul(%p, %x.1) # ./3-ex.py:12:15
48     return (%4)
49
50 -----
51 def forward(self,
52       x: Tensor) -> Tensor:
53     p = self.p
54     return torch.mul(p, x)
55 """

```

## 8.2.2 Load in C++

See [https://pytorch.org/tutorials/advanced/cpp\\_export.html](https://pytorch.org/tutorials/advanced/cpp_export.html).

Load the saved `foo.pt` in C++ from *Export and ignore methods*.

Listing 5: `./code/load-in-cpp/Makefile`

```

1 USE_CXX11_ABI := $(shell python3 -c 'import torch; print(int(torch.compiled_with_cxx11_
  ↳ abi()))')
2 TORCH_INSTALL_DIR := $(shell python3 -c 'import os; import torch; print(os.path.
  ↳ dirname(torch.__file__))')

```

(continues on next page)

(continued from previous page)

```

3  $(info USE_CXX11_ABI $(USE_CXX11_ABI))
4  $(info TORCH_INSTALL_DIR $(TORCH_INSTALL_DIR))
5
6  CXXFLAGS := -I$(TORCH_INSTALL_DIR)/include
7  CXXFLAGS += -I$(TORCH_INSTALL_DIR)/include/torch/csrc/api/include
8  CXXFLAGS += -I$(TORCH_INSTALL_DIR)/include/TH
9  CXXFLAGS += -I$(TORCH_INSTALL_DIR)/include/THC
10 CXXFLAGS += -std=c++14
11 CXXFLAGS += -D_GLIBCXX_USE_CXX11_ABI=$(USE_CXX11_ABI)
12
13

[ CPUFloatType{3} ]

```

### 8.2.3 ArrayRef

See [c10/Utils/ArrayRef.h](#).

**Caution:** `IntArrayRef` is an alias to `ArrayRef<int64_t>`.

`ArrayRef<T>` contains only two members: A const data pointer and a size. It is trivially copyable and assignable.

It has similar methods like `std::vector`. It also has two methods to get the front and back: `front()` and `back()`; both return a const reference.

Its method `vec()` converts itself to a `std::vector` by **copying** the underlying data.

## Constructors

### Data members

Listing 7: `./code/array_ref/main.cc` (Check size)

```

1 struct Foo {
2     const int32_t *p;
3     size_t len;
4 };
5
6 static void TestSize() {
7     // Note: The data pointer in ArrayRef is const!
8     static_assert(sizeof(torch::ArrayRef<int32_t>) == sizeof(Foo), "");
9 }

```

### Default constructed

Listing 8: `./code/array_ref/main.cc` (Default constructor)

```

1 static void TestDefaultConstructor() {
2     torch::ArrayRef<int32_t> a;
3     TORCH_CHECK(a.data() == nullptr);
4     TORCH_CHECK(a.size() == 0);
5     TORCH_CHECK(a.empty() == true);
6
7     TORCH_CHECK(a.begin() == nullptr);
8     TORCH_CHECK(a.end() == nullptr);
9 }

```

### From a single element

Listing 9: `./code/array_ref/main.cc` (From a single element)

```

1 static void TestFromSingleElement() {
2     int32_t a = 10;
3     torch::ArrayRef<int32_t> b(a);
4     TORCH_CHECK(b[0] == a);
5     TORCH_CHECK(b.data() == &a);
6     TORCH_CHECK(b.size() == 1);
7 }

```

## From an initializer list

Listing 10: ./code/array\_ref/main.cc (From an initializer list)

```

1 static void TestFromInitializerList() {
2     torch::ArrayRef<int32_t> a = {1, 2, 3};
3     TORCH_CHECK(a.size() == 3);
4     TORCH_CHECK(a[0] == 1);
5     TORCH_CHECK(a[1] == 2);
6     TORCH_CHECK(a[2] == 3);
7 }

```

## Other types of constructors

- From two pointers: begin and end
- From a pointer and a length
- From a `std::vector`
- From a container that has `data()` and `size()` methods
- From a C array
- From a `std::array`

## 8.2.4 ScalarType

See `c10/core/ScalarType.h` and <https://github.com/pytorch/pytorch/blob/master/torch/csrc/api/include/torch/types.h>.

`ScalarType` is an enum class, i.e., `enum class ScalarType : int8_t { ... }`.

## Members

It has the following members:

Listing 11: ./code/scalar-type/members.cc

```

1 #define AT_FORALL_SCALAR_TYPES_WITH_COMPLEX_EXCEPT_COMPLEX_HALF(_) \
2     _(uint8_t, Byte) \
3     _(int8_t, Char) \
4     _(int16_t, Short) \
5     _(int, Int) \
6     _(int64_t, Long) \
7     _(at::Half, Half) \
8     _(float, Float) \
9     _(double, Double) \
10    _(c10::complex<float>, ComplexFloat) \
11    _(c10::complex<double>, ComplexDouble) \
12    _(bool, Bool) \
13    _(at::BFloat16, BFloat16)

```

## Some aliases

Listing 12: ./code/scalar-type/main.cc (alias)

```
1 static void TestAlias() {  
2     static_assert(c10::ScalarType::Int == c10::kInt, "");  
3     static_assert(c10::ScalarType::Byte == c10::kByte, "");  
4 }
```

Listing 13: ./code/scalar-type/alias.cc

```
1 // See torch/csrc/api/include/torch/types.h  
2 using Dtype = at::ScalarType;  
3  
4 /// Fixed width dtypes.  
5 constexpr auto kUInt8 = at::kByte;  
6 constexpr auto kInt8 = at::kChar;  
7 constexpr auto kInt16 = at::kShort;  
8 constexpr auto kInt32 = at::kInt;  
9 constexpr auto kInt64 = at::kLong;  
10 constexpr auto kFloat16 = at::kHalf;  
11 constexpr auto kFloat32 = at::kFloat;  
12 constexpr auto kFloat64 = at::kDouble;  
13  
14 /// Rust-style short dtypes.  
15 constexpr auto kU8 = kUInt8;  
16 constexpr auto kI8 = kInt8;  
17 constexpr auto kI16 = kInt16;  
18 constexpr auto kI32 = kInt32;  
19 constexpr auto kI64 = kInt64;  
20 constexpr auto kF16 = kFloat16;  
21 constexpr auto kF32 = kFloat32;  
22 constexpr auto kF64 = kFloat64;
```

## ScalarType to CPP type

Listing 14: ./code/scalar-type/main.cc

```

1 static void TestScalarTypeToCppType() {
2     static_assert(
3         std::is_same<
4             int32_t, //
5             c10::impl::ScalarTypeToCppType<c10::ScalarType::Int>::type>::value,
6         "");
7 }

```

## CPP type to ScalarType

Listing 15: ./code/scalar-type/main.cc

```

1 static void TestCppTypeToScalarType() {
2     static_assert(
3         c10::CppTypeToScalarType<float>::value == c10::ScalarType::Float, "");
4 }

```

**Note:** It is `c10::impl::ScalarTypeToCppType`, but it is `c10::CppTypeToScalarType`.

## 8.2.5 TypeMeta

See

- <https://github.com/pytorch/pytorch/blob/master/c10/util/typeid.h>
- <https://github.com/pytorch/pytorch/blob/master/c10/core/ScalarTypeToTypeMeta.h>

`struct TypeMeta` contains only a single `int16_t` data member:

Listing 16: ./code/type-meta/main.cc (Check size)

```

1 static void TestSize() {
2     static_assert(sizeof(caffe2::TypeMeta) == sizeof(int16_t), "");
3 }

```

## Constructors

Listing 17: ./code/type-meta/main.cc (Make)

```

1 static void TestConstructor() {
2     caffe2::TypeMeta t = caffe2::TypeMeta::Make<int32_t>();
3     TORCH_CHECK(t.Match<int32_t>());
4
5     TORCH_CHECK(t.isScalarType());
6
7     TORCH_CHECK(t.isScalarType(torch::kInt));
8     TORCH_CHECK(t.isScalarType(torch::kFloat) == false);

```

(continues on next page)

(continued from previous page)

```
9
10 TORCH_CHECK(t.name() == "int");
11 }
```

## Operations with ScalarType

Listing 18: ./code/type-meta/main.cc (Operations with ScalarType)

```
1 static void TestFromScalarType() {
2     caffe2::TypeMeta t = caffe2::TypeMeta::fromScalarType(torch::kDouble);
3
4     TORCH_CHECK(t.isScalarType(torch::kDouble));
5     TORCH_CHECK(t.name() == "double");
6
7     TORCH_CHECK(t.toScalarType() == torch::kDouble);
8     TORCH_CHECK(t == torch::kDouble);
9     TORCH_CHECK(t != torch::kFloat);
10    TORCH_CHECK(torch::kInt != t);
}
```

### 8.2.6 torch::Device

See

- <https://github.com/pytorch/pytorch/blob/master/c10/core/DeviceType.h>
- <https://github.com/pytorch/pytorch/blob/master/c10/core/Device.h>

#### DeviceType

`torch::DeviceType` is defined as `enum class Device: int8_t {...}`. The most commonly used types are `torch::DeviceType::CPU` and `torch::DeviceType::CUDA`, which are aliased to `torch::kCPU` and `torch::kCUDA`.

Listing 19: ./code/device/main.cc

```

1 void TestDeviceType() {
2     torch::DeviceType d = torch::kCPU;
3     std::ostringstream os;
4     os << d;
5     TORCH_CHECK(os.str() == "cpu");
6
7     TORCH_CHECK(DeviceTypeName(d /*,lower_case=false*/ ) == "CPU");
8     TORCH_CHECK(DeviceTypeName(d, /*lower_case*/ true) == "cpu");

```

## Device

A `torch::Device` class has two members: a `torch::DeviceType` and an `int8_t` index.

Listing 20: ./code/device/main.cc (Constructors)

```

1 void TestDeviceConstructorCPU() {
2     torch::Device d(torch::kCPU);
3     TORCH_CHECK(d.is_cpu() == true);
4     TORCH_CHECK(d.is_cuda() == false);
5     TORCH_CHECK(d.type() == torch::kCPU);
6     TORCH_CHECK(d.has_index() == false);
7     TORCH_CHECK(d.index() == -1);
8     TORCH_CHECK(d.str() == "cpu");
9 }
10
11 void TestDeviceConstructorCUDA() {
12     torch::Device d(torch::kCUDA, 3);
13     TORCH_CHECK(d.is_cpu() == false);
14     TORCH_CHECK(d.is_cuda() == true);
15     TORCH_CHECK(d.type() == torch::kCUDA);
16     TORCH_CHECK(d.has_index() == true);
17     TORCH_CHECK(d.index() == 3);
18     TORCH_CHECK(d.str() == "cuda:3");
19
20     d.set_index(2);
21     TORCH_CHECK(d.index() == 2);
22     TORCH_CHECK(d.str() == "cuda:2");
23
24     d = torch::Device("cpu");
25     TORCH_CHECK(d.is_cpu() == true);
26
27     d = torch::Device("CPU");
28     TORCH_CHECK(d.is_cpu() == true);
29
30     d = torch::Device("cuda:1");
31     TORCH_CHECK(d.is_cuda() == true);
32     TORCH_CHECK(d.index() == 1);
33
34     d = torch::Device("CUDA:1");
35     TORCH_CHECK(d.is_cuda() == true);

```

(continues on next page)

(continued from previous page)

```

36 TORCH_CHECK(d.index() == 1);
37 }

```

## 8.2.7 TensorOptions

See <https://github.com/pytorch/pytorch/blob/master/c10/core/TensorOptions.h>

### Constructors (not recommended)

Listing 21: ./code/tensor-options/main.cc (Not recommended constructors)

```

1 void TestConstructor() {
2     // not recommended
3     torch::TensorOptions opt1(torch::kCPU);
4     torch::TensorOptions opt2(torch::Device(torch::kCPU));
5     torch::TensorOptions opt3(torch::Device({torch::kCUDA, 1}));
6     torch::TensorOptions opt4("cpu");
7     // torch::TensorOptions opt5("CPU") // error;
8     torch::TensorOptions opt6("cuda:1");
9     // torch::TensorOptions opt7("CUDA:1"); // error
10
11     // not recommended, from a scalar type (implicit)
12     torch::TensorOptions opt8(torch::kInt32);
13 }

```

### Constructors (Recommended)

Listing 22: ./code/tensor-options/main.cc (Recommended constructors)

```

1 void TestConstructor2() {
2     // recommended
3     torch::TensorOptions opt1 = torch::dtype(torch::kFloat);
4     torch::TensorOptions opt2 = torch::dtype(caffe2::TypeMeta::Make<float>());
5     torch::TensorOptions opt3 = torch::device(torch::kCPU);
6     torch::TensorOptions opt4 = torch::device({torch::kCUDA, 1});
7     // Note: torch::device() returns a TensorOptions
8     // while torch::Device() is the constructor of a class
9
10    torch::TensorOptions opt5 = torch::requires_grad(true);
11    std::cout << opt5 << "\n";
12    // TensorOptions(dtype=float (default), device=cpu (default), layout=Strided
13    // (default), requires_grad=true, pinned_memory=false (default),
14    // memory_format=(nullopt))
15
16    torch::TensorOptions opt6 = torch::dtype<float>();
17    std::cout << torch::toString(opt6) << "\n";
18    // TensorOptions(dtype=float, device=cpu (default), layout=Strided (default),

```

(continues on next page)

(continued from previous page)

```

19 // requires_grad=false (default), pinned_memory=false (default),
20 // memory_format=(nullopt))
21
22 std::cout << "default:" << torch::TensorOptions() << "\n";
23 // default:TensorOptions(dtype=float (default), device=cpu (default),
24 // layout=Strided (default), requires_grad=false (default),
25 // pinned_memory=false (default), memory_format=(nullopt))
26 }

```

## Methods

Listing 23: ./code/tensor-options/main.cc (Methods)

```

1 void TestMethods() {
2     torch::TensorOptions opts = torch::dtype<float>();
3     TORCH_CHECK(opts.device() == torch::Device(torch::kCPU));
4     // It has not device_type()!
5     TORCH_CHECK(opts.device() == torch::kCPU);
6     TORCH_CHECK(opts.device().type() == torch::kCPU);
7     TORCH_CHECK(opts.requires_grad() == false);
8
9     torch::TensorOptions opts2 =
10         opts.device("cuda:2").dtype(torch::kInt).requires_grad(false);
11
12     TORCH_CHECK(opts2.dtype() == caffe2::TypeMeta::Make<int32_t>());
13     TORCH_CHECK(opts2.dtype() == torch::kInt32);
14     TORCH_CHECK(opts2.requires_grad() == false);
15 }

```

## 8.2.8 Tensor Creation

See

### TensorDataContainer

---

**Note:** data is **copied** to the returned tensor!

---

See

- <https://github.com/pytorch/pytorch/blob/master/torch/csrc/api/include/torch/detail/TensorDataContainer.h>
- [https://github.com/pytorch/pytorch/blob/master/tools/autograd/templates/variable\\_factories.h](https://github.com/pytorch/pytorch/blob/master/tools/autograd/templates/variable_factories.h)
- <https://github.com/pytorch/pytorch/blob/master/aten/src/ATen/Utils.cpp>

Support the following data types:

- From a `std::vector<T>`
- From a scalar

- From an initializer list
- From an `ArrayRef<T>`.

### From `std::vector`

Listing 24: `./code/tensor-creation/main.cc`

```
1 static void FromStdVecotr() {  
2     torch::Tensor t1 = torch::tensor(std::vector<int32_t>{1, 2, 3});  
3     TORCH_CHECK(t1.scalar_type() == torch::kLong);  
4     t1 = t1.to(torch::kInt);  
5     const int32_t *p1 = t1.data_ptr<int32_t>();  
6     TORCH_CHECK(p1[0] == 1);  
7     TORCH_CHECK(p1[1] == 2);  
8     TORCH_CHECK(p1[2] == 3);  
9  
10    torch::Tensor t2 = torch::tensor(std::vector<float>{1, 2, 3});  
11    TORCH_CHECK(t2.scalar_type() == torch::kFloat);  
12  
13    torch::Tensor t3 =  
14        torch::tensor(std::vector<double>{1, 2, 3}, torch::kDouble);  
15    TORCH_CHECK(t3.scalar_type() == torch::kDouble);  
16  
17    torch::Tensor t4 =  
18        torch::tensor(std::vector<double>{1, 2, 3},  
19                      torch::dtype(torch::kDouble).device("cuda:0"));  
20    TORCH_CHECK(t4.is_cuda());  
21 }
```

### From scalar

Listing 25: ./code/tensor-creation/main.cc

```
1 static void FromScalar() {
2     torch::Tensor t = torch::tensor(3);
3     TORCH_CHECK(t.item<int64_t>() == 3);
4
5     torch::Tensor t2 = torch::tensor(0.5);
6     TORCH_CHECK(t2.scalar_type() == torch::kFloat);
7 }
```

## From initializer list

Listing 26: ./code/tensor-creation/main.cc

```
1 static void FromInitializerList() {
2     torch::Tensor t1 = torch::tensor({1, 2, 3});
3     torch::Tensor t2 = torch::tensor(std::vector<int32_t>{1, 2, 3});
4     TORCH_CHECK(torch::allclose(t1, t2));
5
6     torch::Tensor t3 = torch::tensor({{1, 2, 3}, {4, 5, 6}});
7     TORCH_CHECK(t3.dim() == 2);
8
9     torch::Tensor t4 = torch::tensor({1, 2, 3});
10    torch::Tensor t5 = torch::tensor({4, 5, 6});
11    TORCH_CHECK(torch::allclose(t3[0], t4));
12    TORCH_CHECK(torch::allclose(t3[1], t5));
13 }
```

## From ArrayRef

Listing 27: ./code/tensor-creation/main.cc

```

1 static void FromArrayRef() {
2     int32_t i[] = {1, 2, 3};
3     torch::ArrayRef<int32_t> a(i);
4     torch::Tensor t = torch::tensor(a);
5     // Data is copied to t
6
7     TORCH_CHECK(t[0].item<int64_t>(), 1);
8     TORCH_CHECK(t[1].item<int64_t>(), 2);
9     TORCH_CHECK(t[2].item<int64_t>(), 3);
10 }

```

## 8.2.9 Tensor

See

- <https://github.com/pytorch/pytorch/blob/master/aten/src/ATen/core/TensorBase.h>
- <https://github.com/pytorch/pytorch/blob/master/aten/src/ATen/templates/TensorBody.h>
- <https://github.com/pytorch/pytorch/blob/master/c10/core/TensorImpl.h>

### Common methods

Listing 28: ./code/tensor/main.cc (Not recommended constructors)

```

1 static void TestCommonMethods() {
2     torch::Tensor t = torch::rand({2, 3, 4});
3
4     TORCH_CHECK(t.dim() == 3); // 3-d tensor
5     TORCH_CHECK(t.ndimension() == t.dim()); // same
6     TORCH_CHECK(t.numel() == 2 * 3 * 4);
7     TORCH_CHECK(t.is_contiguous() == true);
8     TORCH_CHECK(t.contiguous().is_contiguous() == true);
9
10    t.fill_(10); // fill all entries to 10
11    t.zero(); // zero out all entries
12
13    t = t.to(torch::kInt);
14    TORCH_CHECK(t.is_floating_point() == false);
15    TORCH_CHECK(t.is_signed() == true);
16
17    TORCH_CHECK(t.size(0) == 2);
18    TORCH_CHECK(t.size(1) == 3);
19    TORCH_CHECK(t.size(2) == 4);
20    TORCH_CHECK(t.sizes() == torch::ArrayRef<int64_t>({2, 3, 4}));
21
22    t = t.contiguous();
23    TORCH_CHECK(t.stride(0) == 3 * 4);
24    TORCH_CHECK(t.stride(1) == 4);
25    TORCH_CHECK(t.stride(2) == 1);

```

(continues on next page)

(continued from previous page)

```

26 TORCH_CHECK(t.strides() == torch::ArrayRef<int64_t>({12, 4, 1}));
27
28 TORCH_CHECK(t.defined() == true);
29 {
30     torch::Tensor a;

46     TORCH_CHECK(torch::allclose(b[0], x));
47     TORCH_CHECK(torch::allclose(b[1], x));
48 }

```

## 8.3 Logical operations

Listing 38: ./code/logical-op.py

```

1  #!/usr/bin/env python3
2
3  import torch
4
5  a = torch.tensor([float("inf")])
6  b = torch.tensor([float("nan")])
7  assert torch.isinf(a).item() is True
8  assert torch.isnan(a).item() is False
9
10 assert torch.isinf(b).item() is False
11 assert torch.isnan(b).item() is True
12
13 assert torch.logical_or(torch.isinf(a), torch.isnan(b)).item() is True
14
15 assert a.isinf().item() is True
16 assert a.isnan().item() is False
17
18 assert b.isinf().item() is False
19 assert b.isnan().item() is True

```

## 8.4 Note

To clip gradient, use:

```
tot_norm = torch.nn.utils.clip_grad_norm_(model.parameters(), max_norm=5, norm_type=2.0)
if torch.logical_or(tot_norm.isnan(), tot_norm.isinf()):
    # skip this update
    continue
else:
    optimizer.step()
```

## 9.1.5 TODOs

`asyncio.to_thread()` runs the function in an executor, where the default executor is a threadpool executor, which invokes `loop.run_in_executor()` indirectly.

How to set the executor of a loop? Maybe something related to `set_default_executor`?

If we want to schedule a callback to run in the loop from the C++ code, we can use `loop.call_soon_safe()` method.

## 9.2 argv

From the doc <https://docs.python.org/3/library/sys.html>:

The `list` of command line arguments passed to a Python script. `argv[0]` is the script name (it is operating system dependent whether this is a full pathname or not). If the command was executed using the `-c` command line option to the interpreter, `argv[0]` is set to the string

(continues on next page)

(continued from previous page)

```
'-c'. If no script name was passed to the Python interpreter,  
argv[0] is the empty string.
```

Note that `argv` is at least of size 1, though `argv[0]` may be an empty string.

```
import sys  
print(sys.argv)
```

## 9.3 TODO

Python with zeroMQ (c extension)

## 9.4 time

```
import time  
print(f'Started at {time.strftime("%X")}')  
# do something  
print(f'Finished at {time.strftime("%X")}')
```

## 9.5 Numbers

### 9.5.1 binary representation

Listing 3: `./code/numbers/representations.py`

```
1 print(bin(1)) # 0b1  
2 print(bin(3)) # 0b11  
3 print(bin(255)) # 0b11111111  
4 print(bin(256)) # 0b100000000  
5 assert isinstance(bin(1), str)

## 9.7 enum

### 9.7.1 Hello

See <https://docs.python.org/3.11/howto/enum.html>

## Enum

Note:

- It is iterable, i.e., supports `__iter__`
- name and value
- alias and `@unique`.
- `__members__`.
- `str` and `repr`.
- `auto`

Listing 5: `./code/hello/ex1.py`

```

1  from enum import Enum
2
3
4  class Color(Enum):
5      RED = 1
6      GREEN = 2
7      BLUE = 3
8      # BLUE = 4 # TypeError: Attempted to reuse key: 'BLUE'
9      ALIAS_FOR_RED = 1 # Use @unique to disallow this
10     MAX_COLOR = 4 # Note the naming convention
11
12
13     assert isinstance(Color.RED, Color)
14
15     assert str(Color(1)) == "Color.RED"
16     assert str(repr(Color(1))) == "<Color.RED: 1>"
17
18     assert Color.RED.name == "RED"
19     assert Color.BLUE.value == 3
20
21     print(list(Color))
22     print(type(list(Color)[0]))
23     for c in Color:
24         print(c, type(c))
25
26     """
27     [

```

(continues on next page)

(continued from previous page)

```

39 print(Color.__members__)

## 9.8.5 inet\_pton

[https://man7.org/linux/man-pages/man3/inet\\_pton.3.html](https://man7.org/linux/man-pages/man3/inet_pton.3.html)

Representation format to network address.

The resulting network address is in network order, i.e., big endian.

Listing 12: ./code/inet\_pton.c

```

1 #include <arpa/inet.h>
2 #include <stdio.h>
3
4 int main() {
5     struct in_addr addr;
6     int res = inet_pton(AF_INET, "192.168.1.2", &addr);
7     printf("%08x\n", addr.s_addr);
8     printf("192: %x\n", 192);
9     printf("168: %x\n", 168);
10    printf("1: %x\n", 1);
11    printf("2: %x\n", 2);
12    return 0;
13 }
14 #if 0
15 ./inet_pton
16 0201a8c0
17 192: c0
18 168: a8
19 1: 1
20 2: 2
21 #endif

```

Its implementation can be found at [https://github.com/bminor/glibc/blob/master/resolv/inet\\_pton.c](https://github.com/bminor/glibc/blob/master/resolv/inet_pton.c)

Listing 13: ./code/inet\_pton\_impl.c

## 9.8.7 Echo Server and Client

### Server

Listing 16: ./code/echo-hello/server.py

```

1  #!/usr/bin/env python3
2  import socket
3  import threading
4
5  # nc localhost 6006
6

```

(continues on next page)

(continued from previous page)

```
7
8 def run_server():
9     sock = socket.socket(family=socket.AF_INET, type=socket.SOCK_STREAM)
10    sock.setsockopt(socket.SOL_SOCKET, socket.SO_REUSEADDR, 1)
11    sock.bind("", 6006)
12    # sock.setblocking(False) # It returns socket.BlockingIOError
13    sock.listen(2) # backlog is 2
14    while True:
15        client_sock, addr = sock.accept()
16        assert isinstance(client_sock, socket.socket)
17        assert isinstance(addr, tuple)
18        assert isinstance(addr[0], str)
19        assert isinstance(addr[1], int)
20        print("Connected from", addr) # Connected from ('127.0.0.1', 54266)
21        threading.Thread(target=handle_client, args=(client_sock,)).start()
22
23
24 def handle_client(sock: socket.socket):
25     while True:
26         data = sock.recv(1024)
27         if not data:
28             break
29         sock.sendall(data.decode("utf-8").upper().encode())
30     print("Disconnected from", sock.getpeername())
31     sock.close()
32
33
34 if __name__ == "__main__":
35     run_server()
```

To test the server, use `nc localhost 6006` or use the following client.

## Client

Listing 17: ./code/echo-hello/client.py

```

1 def main():
2     sock = socket.socket(socket.AF_INET, socket.SOCK_STREAM)
3     sock.connect(("localhost", 6006))
4     for i in range(5):
5         sock.send("hello".encode())
6         b = sock.recv(1024)
7         print(b.decode())
8         time.sleep(0.5)

```

## Server2

With `concurrent.futures.ThreadPoolExecutor`.

Listing 18: ./code/echo-hello/server2.py

```

1  #!/usr/bin/env python3
2  import socket
3  import threading
4  from concurrent.futures import ThreadPoolExecutor
5
6  # nc localhost 6006
7  pool = ThreadPoolExecutor(max_workers=3)
8
9
10 def run_server():
11     sock = socket.socket(family=socket.AF_INET, type=socket.SOCK_STREAM)
12     sock.setsockopt(socket.SOL_SOCKET, socket.SO_REUSEADDR, 1)
13     sock.bind("", 6006)
14     # sock.setblocking(False) # It returns socket.BlockingIOError
15     sock.listen(2) # backlog is 2
16     while True:
17         client_sock, addr = sock.accept()
18         assert isinstance(client_sock, socket.socket)
19         assert isinstance(addr, tuple)
20         assert isinstance(addr[0], str)
21         assert isinstance(addr[1], int)
22         print("Connected from", addr) # Connected from ('127.0.0.1', 54266)
23         pool.submit(handle_client, client_sock)
24
25
26 def handle_client(sock: socket.socket):
27     while True:
28         data = sock.recv(1024)
29         if not data:
30             break
31         sock.sendall(data.decode("utf-8").upper().encode())
32     print("Disconnected from", sock.getpeername())
33     sock.close()
34
35

```

(continues on next page)

(continued from previous page)

```
36 if __name__ == "__main__":  
37     run_server()
```

### 9.8.8 TODOs

- Beej's Guide to Network Programming Using Internet Sockets  
<https://www.gta.ufrj.br/ensino/eel878/sockets/index.html>
- LWN.net Weekly Edition Archives  
<https://lwn.net/Archives/>

## 10.1 Install

### 10.1.1 formatter

Install <https://github.com/google/google-java-format>

```
wget https://github.com/google/google-java-format/releases/download/v1.15.0/google-java-format-1.15.0-all-deps.jar
```

Create a script with filename `google-java-format`:

```
#!/usr/bin/env bash

java -jar /ceph-sh0/fangjun/download/google-java-format-1.15.0-all-deps.jar $@
```

`chmod +x google-java-format` and add the path to `PATH`.

### 10.1.2 JDK

Go to <https://www.oracle.com/java/technologies/downloads/#java17> and download

```
wget https://download.oracle.com/java/17/latest/jdk-17_linux-x64_bin.tar.gz
mkdir /ceph-fj/fangjun/software/
tar xvf jdk-17_linux-x64_bin.tar.gz -C /ceph-fj/fangjun/software
```

And then set the following environment variables:

```
export JAVA_HOME=/ceph-fj/fangjun/software/jdk-17.0.3
export PATH=$JAVA_HOME/bin:$JAVA_HOME
```

## 10.2 Hello world

Listing 1: Hello.java

```
// Usage 1:
//  java Hello.java
// Usage 2:
//  javac Hello.java
//  java Hello
//
// Note:
//  - "javac Hello.java" generates a file "Hello.class"
//  - "java Hello" takes as input "Hello.class" and executes it
//
class Hello {
    public static void main(String[] args) {
        System.out.println("hello world");
    }
} // There is no ';' here
```

Listing 2: EqualTest.java

```
class EqualTest {
    public int i;

    public EqualTest(int a) {
        this.i = a;
    }

    public boolean equals(Object anObject) {
        if (this == anObject) {
            return true;
        }
        if (anObject instanceof EqualTest) {
            return this.i == ((EqualTest) anObject).i;
        }
        return false;
    }

    public static void main(String[] args) {
        EqualTest e1 = new EqualTest(10);
        EqualTest e2 = new EqualTest(10);

        System.out.println(e1 == e2); // false, compare the reference
        System.out.println(e1 != e2); // true
        System.out.println(e1.equals(e2)); // true, compare the contained value
    }
}
```

## 10.3 Reference

- <https://docs.oracle.com/javase/tutorial/>
- <https://docs.oracle.com/en/java/javase/17/docs/api/index.html>
- <https://github.com/openjdk/jdk.git>

Clone it and you can find the source code in `src/java.base/share/classes/java/lang/System.java` for `java.lang.System`.

## JAVASCRIPT

### 11.1 Hello world

```
console.log('hello world')  
console.log(eval('3 + 5'))
```

To write multi-line javascript, use shift + Enter for a new line.

```
(function(){  
    "use strict";  
    /* Start of your code */  
    function greetMe(yourName) {  
        alert('Hello ' + yourName);  
    }  
  
    greetMe('World');  
    /* End of your code */  
})();
```

It is case sensitive. Statements are separated by ;. Comments are the same as in C/C++.

#### 11.1.1 array

Listing 1: ./code/hello\_world/array.js

```
1 let a = [ 1, 2, 3 ];  
2 function sum(arr) {  
3     let s = 0;  
4     for (let x of arr) {  
5         s += x;  
6     }  
7     return s;  
8 }  
9 // Sum of the array [1,2,3] is 6  
10 console.log('Sum of the array [' + a + '] is ' + sum(a));  
11  
12 function sum2(arr) {  
13     let s = 0;  
14     for (let i = 0; i != arr.length; ++i) {
```

(continues on next page)

(continued from previous page)

```
15     s += arr[i];
16   }
17   return s;
18 }
19 console.log(sum2(a)); // 6
```

Note that there are two ways to iterate an array:

- `for(let x of array)`
- `for(let i = 0; i != array.length; ++i) { ... }`

To run the above code, use:

```
node array.js
```

## 11.1.2 class

Listing 2: `./code/hello_world/class.js`

```
1 class Point {
2   constructor(x, y) {
3     this.x = x;
4     this.y = y;
5   }
6
7   distance() { return Math.sqrt(this.x * this.x + this.y * this.y); }
8 }
9
10 let p = new Point(1, 1);
11 console.log(p.distance()); // 1.4142135623730951
```

It defines a `Point` class with two fields `x`, `y`. `Point` has two methods: a constructor and a method `distance()`.

Note that class names are by convention capitalized.

## 11.2 node

Go to <https://nodejs.org/en/download/> to download pre-built binaries:

```
wget https://nodejs.org/dist/v16.15.1/node-v16.15.1-linux-x64.tar.xz
tar xvf node-v16.15.1-linux-x64.tar.xz
```

and then add `/path/to/node-v16.15.1-linux-x64/bin/` to `PATH`.

## 11.3 TODOs

1. This page [https://developer.mozilla.org/en-US/docs/Learn/Getting\\_started\\_with\\_the\\_web/Installing\\_basic\\_software](https://developer.mozilla.org/en-US/docs/Learn/Getting_started_with_the_web/Installing_basic_software) lists some tools to minify code:
  - WebPack: <https://webpack.js.org/>
  - Grunt: <https://gruntjs.com/>
  - Gulp: <https://gulpjs.com/>
2. Color picker tool: [https://developer.mozilla.org/en-US/docs/Web/CSS/CSS\\_Colors/Color\\_picker\\_tool](https://developer.mozilla.org/en-US/docs/Web/CSS/CSS_Colors/Color_picker_tool)
3. Google font: <https://fonts.google.com/> and [https://developers.google.com/fonts/docs/getting\\_started](https://developers.google.com/fonts/docs/getting_started)

## 12.1 Hello world

Listing 1: hello\_world.html

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>Hello World</title>
  </head>
  <body>
    <p>Hello world</p>
  </body>
</html>
```

### 12.1.1 comments

```
<!-- this is a comment -->
```

### 12.1.2 images

```
</img>
</img>
</img>
```

### 12.1.3 ordered lists

```
<p> The following points </p>

<ol>
  <li> First </li>
  <li> Second </li>
</ol>
```

### 12.1.4 unordered lists

```
<p> The following points </p>

<ul>
  <li> foo </li>
  <li> bar </li>
</ul>
```

### 12.1.5 links

```
<a href="https://www.google.com">some text</a>
```

## 12.2 References

- Structuring the web with HTML  
<https://developer.mozilla.org/en-US/docs/Learn/HTML>

## 13.1 Hello world

### 13.1.1 comment

```
/* this is a comment */
```

```
p { color: red; }
```

Then, in some html file, use:

```
<link href="abc/foo.css" rel="stylesheet">
```

### 13.1.2 Selector

- tag name or element name: e.g., p selects <p>; h1 selects <h1>.
- ID:, e.g., #my-id selects <a id="my-id"> or <p id="my-id">
- class: e.g., .my-class selects <a class="my-class"> and <p class="my-class">
- attribute: e.g., img[src] selects  but not <img>

See [https://developer.mozilla.org/en-US/docs/Learn/Getting\\_started\\_with\\_the\\_web/CSS\\_basics#different\\_types\\_of\\_selectors](https://developer.mozilla.org/en-US/docs/Learn/Getting_started_with_the_web/CSS_basics#different_types_of_selectors) and [https://developer.mozilla.org/en-US/docs/Learn/CSS/Building\\_blocks/Selectors](https://developer.mozilla.org/en-US/docs/Learn/CSS/Building_blocks/Selectors) for more.

Example with multiple rules:

Listing 1: Example with multiple rules

```
p {  
  color: red;  
  width: 500px;  
  border: 1px solid black;  
}
```

Example with multiple selectors:

## **14.1 GIL**

## PROTOCOL BUFFERS

### 15.1 Installation

#### 15.1.1 C++

See <https://github.com/protocolbuffers/protobuf/blob/main/src/README.md>.

```
make protocol-buffers
cd protocol-buffers
wget https://github.com/protocolbuffers/protobuf/releases/download/v3.20.1/protobuf-all-
↪3.20.1.tar.gz
tar xvf protobuf-all-3.20.1.tar.gz
cd protobuf-all-3.20.1
./configure --prefix=$HOME/software/protobuf-3.20.1
make -j 20
make -j 10 check
make install 2>&1 | tee my-log.txt
cd $HOME/software/protobuf-3.20.1
tree . > tree-log.txt
```

```
$ export PKG_CONFIG_PATH=$HOME/software/protobuf-3.20.1:$PKG_CONFIG_PATH

$ pkg-config --cflags protobuf
-I/root/fangjun/software/protobuf-3.20.1/include

$ pkg-config --libs protobuf
-L/root/fangjun/software/protobuf-3.20.1/lib -lprotobuf

$ pkg-config --cflags --libs protobuf
-I/root/fangjun/software/protobuf-3.20.1/include -L/root/fangjun/software/protobuf-3.20.
↪1/lib -lprotobuf

$ pkg-config --libs-only-L protobuf
-L/root/fangjun/software/protobuf-3.20.1/lib

$ pkg-config --libs-only-l protobuf
-lprotobuf
```

```
$ export PATH=$HOME/software/protobuf-3.20.1/bin:$PATH
$ protoc --version
libprotoc 3.20.1
```

Listing 1: ./code/my-log.txt (Installation logs)

38 -----
39 Libraries have been installed in:
40   /root/fangjun/software/protobuf-3.20.1/lib
41
42 If you ever happen to want to link against installed libraries
43 in a given directory, LIBDIR, you must either use libtool, and
44 specify the full pathname of the library, or use the '-LLIBDIR'
45 flag during linking and do at least one of the following:
46   - add LIBDIR to the 'LD_LIBRARY_PATH' environment variable
47     during execution
48   - add LIBDIR to the 'LD_RUN_PATH' environment variable
49     during linking
50   - use the '-Wl,-rpath -Wl,LIBDIR' linker flag
51   - have your system administrator add LIBDIR to '/etc/ld.so.conf'
52
53 See any operating system documentation about shared libraries for
54 more information, such as the ld(1) and ld.so(8) manual pages.

## 15.2 Hello

### 15.2.1 hello.proto

See

- <https://developers.google.com/protocol-buffers/docs/cpptutorial>
- <https://developers.google.com/protocol-buffers/docs/pythontutorial>

Listing 3: ./code/hello.proto

```

1  syntax = "proto2";
2
3  package tutorial;
4
5  // available types:
6  // bool, int32, float, double, string
7  message Person {
8      optional string name = 1;
9      optional int32 id = 2;
10     optional string email = 3;
11
12     enum PhoneType {
13         MOBILE = 0;
14         HOME = 1;
15         WORK = 2;
16     }
17
18     message PhoneNumber {
19         optional string number = 1;
20         optional PhoneType type = 2 [ default = HOME ];

```

(continues on next page)

(continued from previous page)

```

21     }
22
23     repeated PhoneNumber phones = 4;
24 }
25
26 message AddressBook { repeated Person people = 1; }

```

## 15.2.2 makefile

Listing 4: ./code/Makefile

```

1 .PHONY: all clean
2
3 all: hello.pb.cc hello.pb.h hello_pb2.py
4
5 hello.pb.cc hello.pb.h: hello.proto
6     protoc -I=./ --cpp_out=./ ./hello.proto

An ELF linker. Read its source code!

## 18.2 Questions

1. How to view PLT?
2. How to view the relocation information? How many types of relocation are there?
3. What PIC code and non-PIC code look like?
4. What is lazy binding and how to use LD\_BIND\_NOW?
5. What is PLT and GOT?

## 19.1 aishell

### 19.1.1 AM training

The first one was added on 2019-02-01.

`asr_train.py` is in `espnet/bin/asr_train.py`, which invokes `espnet.asr.pytorch_backend.asr.train`.

The model is from `espnet.nets.pytorch_backend.e2e_asr.E2E`.

The encoder type *vggblstm*, 3 layers, hidden dim, 1024, proj dim 1024, subsampling 1\_2\_2\_1\_1.

Command is:

```
asr_train.py \  
  --config conf/train.yaml \  
  --preprocess-conf \  
  --ngpu 1 \  
  --backend pytorch \  
  --outdir exp/xxx \  
  --debugmode 1 \  
  --dict data/lang_char/train_sp_units.txt \  
  --minibatches 0 \  
  --verbose 0 \  
  --resume \  
  --train-json xxx/data.json \  
  --valid-json yyy/data.json
```

## 20.1 Tutorials
